LEAD GENERATION

Executive summary

Maintain Media has supported SIC across paid advertising, creative production, organic social media and broader brand collateral. The work has focused on strengthening SIC's presence across its different business areas, developing the creative assets required to support each offer, and establishing a Meta lead-generation channel that is now producing enquiries.

What this activity is building

**Awareness**

Advertising and organic content increase visibility for SIC and its different service offerings.

**Lead generation**

Meta advertising turns targeted attention into direct enquiries and potential opportunities.

**Brand credibility**

Consistent, professional creative strengthens how SIC is presented across consumer and commercial markets.

**Sales support**

Business in a Box and product-focused collateral give SIC stronger assets to communicate its offers.

02 Paid media and lead generation

Maintain Media developed and launched a dedicated Meta lead-generation campaign for SIC, creating a direct-response channel designed to convert targeted advertising traffic into enquiries. The campaign has begun generating leads, establishing an initial performance baseline that can be developed further through continued optimisation, audience refinement and creative testing.

AREA	DELIVERED / PURPOSE
Campaign status	Live on Meta
Primary objective	Generate direct enquiries for SIC
Current outcome	Campaign has generated leads
Ongoing role	Monitor performance, test creative and improve efficiency over time

Advertising creative

To support campaign performance and give SIC multiple concepts to test, Maintain Media produced 12 dedicated advertising creatives. This gives the account a broader library of assets to rotate across different messages and visual approaches, rather than relying on a single concept, and creates more opportunities to identify the strongest-performing direction as campaign data develops.

Why multiple creative assets matter

- Creates more opportunities to test different customer motivations and messages.
- Builds a reusable creative library for future campaign iterations.
- Reduces reliance on a single advertisement or visual direction.
- Provides flexibility to refresh the campaign as performance data develops.

KEY OUTCOME

SIC now has an active paid acquisition channel on Meta, supported by a dedicated creative library and early lead generation.

03 Brand and creative development

Alongside paid media, Maintain Media has developed supporting marketing assets across SIC's wider business areas, creating a more consistent and professional presentation across digital campaigns, sales conversations and physical brand touchpoints.

BUSINESS IN A BOX

Packaging the opportunity

Dedicated marketing designs that present Business in a Box as a commercial opportunity and complete business system, rather than simply another product, supporting advertising and prospective operator conversations.

IBC BOX BRANDING

Brand on the product itself

The sticker design for the IBC Box was finalised, giving SIC a finished branded element for the physical product and extending the brand beyond digital marketing.

SIC MINING

Capability-led positioning

Dedicated marketing designs supporting a more capability-led and professional presentation for SIC's mining and industrial offering to commercial and B2B audiences.

04 Organic social media

Maintain Media developed social media content for SIC Surface, with the initial focus centred on asphalt driveways and resurfacing. The role of this content is to keep the brand active, provide useful context to prospective customers and support the credibility of paid advertising activity.

- Showcases SIC Surface services and applications.
- Educates prospective customers around resurfacing options.
- Supports familiarity and trust for prospects who research the business after seeing an ad.
- Demonstrates the visual impact of asphalt and resurfacing work.
- Keeps SIC Surface active and visible across social channels.
- Creates content that can be repurposed into future marketing and advertising assets.

WHERE IT LANDS

Brand and creative work now spans three SIC business areas, from advertising design through to the branding on the physical product.

— THE SYSTEM

How the activity works together

Each element supports the others. Advertising creates the attention, creative earns the trust, and collateral converts the conversation.

**Awareness**

Ads, social content and brand creative increase SIC's visibility across its target markets.

**Lead generation**

Meta advertising provides a direct acquisition channel for turning targeted audiences into enquiries.

**Trust & credibility**

Consistent creative and an active social presence give prospects more confidence in the SIC brand.

**Sales enablement**

Business in a Box collateral, IBC branding and SIC Mining assets support stronger offer presentation.

Ongoing direction

With the initial marketing foundations now in place, the next phase is centred on continuing to optimise the active Meta campaign, expanding the strongest creative directions, maintaining a consistent SIC Surface social presence and building out the creative library across SIC Mining and Business in a Box.

— KEY OUTCOME

A more complete marketing foundation for SIC.

Maintain Media has combined paid lead generation, advertising creative, organic social content, product branding and sales-focused collateral across the group, giving SIC one connected marketing system rather than a set of separate activities.
